Techmount's New "Beast of the Woods" MX Mount

(OAKLAND, FL) If you've put off bolting on that expensive GPS because you couldn't find a mount that could stand up to a daily trail pounding, take a look at Techmount's new off-road model.

Our new MX mount combines the versatility of the motorcycle line with a 50% increase in structural content. The result is an incredibly rugged and robust handlebar mount that's nearly indestructible.

Designed and precision crafted entirely in the USA from T6 6061, Techmount's newest addition is available in anodized black, silver and one-of-a-kind industry breakthrough camouflage. All necessary stainless steel fastening hardware is included.

The off-road mount comes factory ready to accept a wide range of GPS cradles as well as most other personal technology, including cell phones, walkie talkies, PIAA lighting and mp3s.

All Techmount solutions are non-marring, non-destructive and come with a full one-year guarantee against failure due to any manufacturing defect.
